

## Table of Contents

Chapter 1 .....	1
1. Introduction .....	1
1.1. Water Scarcity, Droughts and Climate Change .....	1
1.2. Water Management .....	3
1.3. Objectives of the research and methodology .....	5
1.4. Introducción .....	9
1.5. Escasez de agua, sequías y cambio climático .....	10
1.6. Gestión del agua .....	11
1.7. Objetivos de la investigación y metodología .....	14
1.8. References .....	18
Chapter 2 .....	21
2. Tradeoffs between Water Uses and Environmental Flows: A Hydroeconomic Analysis in the Ebro Basin .....	21
2.1. Introduction .....	22
2.2. The Ebro River Basin .....	24
2.3. The hydro-economic model of the Ebro basin .....	25
2.3.1 Reduced form hydrological component .....	26
2.3.2 Economic component .....	27
2.3.3 Environmental component .....	29
2.3.4 Policy analysis and environmental flows .....	31
2.4. Results and policy implications .....	32
2.4.1 Baseline scenario of environmental flow and proportional allocation policy .....	32
2.4.2 Environmental flow proposals ACA (2015) and ACA (2007) under different allocation policies .....	34
2.5. Conclusions .....	38
2.6. References .....	40
2.7. Appendix .....	44
2.7.1 Irrigation districts and urban centers and the Ebro Basin network .....	44
2.7.2 Modelling framework, and Outcomes from current and ACA 2007 flow scenarios with moderate drought .....	46
2.7.3 Disaggregated results by irrigation district .....	46
Chapter 3 .....	55
3. Integrating ecosystem benefits for sustainable water allocation in hydroeconomic modeling .....	55
Abstract .....	55
3.1. Introduction .....	56
3.2. The Ebro basin .....	60
3.3. Methods .....	61
3.3.1 Response of ecosystems to stream flow levels .....	62
3.3.2 Modeling framework of the Ebro basin .....	65
3.4. Results .....	72
3.5. Discussion .....	77
3.6. Conclusions and policy implications .....	80
3.7. References .....	82
3.8. Appendix .....	89
3.8.1 Figures and tables .....	89

Chapter 4 .....	93
4. Hydroeconomic analysis of droughts in the Ebro basin using copulas for streamflow simulation .....	93
4.1. Introduction.....	94
4.2. Modeling framework .....	96
4.2.1 Streamflow simulation methodology .....	98
4.2.2 Model components and scenarios .....	101
4.2.3 Reduced-form hydrological component .....	101
4.2.4 Regional economic component.....	103
4.2.5 Model optimization, scenarios and sustainability outcomes.....	105
4.3. Results.....	107
4.3.1 Sustainability of the water systems for irrigation .....	108
4.3.2 Sustainability of the water systems for irrigation and the environment .....	120
4.4. Conclusion .....	123
4.5. References.....	124
4.6. Appendix.....	128
4.6.1 Beta regression for modelling proportions and bounded data .....	128
4.6.2 Reliability, resilience, vulnerability and sustainability index .....	131
4.6.3 Probably, exceedance of probability and conditional probability.....	131
4.6.4 The join probability of drought duration and drought intensity .....	134
4.6.5 Figures.....	135
4.6.6 References.....	145
5. Summary and Conclusions .....	147
5.1. Summary .....	148
5.2. Conclusion and future research.....	151
5.3. Resumen y conclusiones .....	152
5.4. Resumen.....	153
5.5. Conclusión e investigación futura.....	157
